ITCS285 Database Management Systems
Second Semester, 2025-2026

Lab #1

Let us consider a bank database with the following tables:

Table Client

ClientID	FirstName	LastName	Phone	Address	Profession
10000	Ahmad	Abd Allah	2134657	Manama	Professor
10001	Ghazi	Al-Amri	2345676	Manama	Student
10002	Mohamed	Al-Hamed	5467698	Manama	Trader
10003	Ali	Hussain	6578790	Manama	Teller
10004	Amer	Al-Salah	6578798	Manama	Professor
10005	Salah	Al-Kacem	6579879	Manama	Engineer

Table Bank

BankID	BankName
30001	BBK
30002	NBB
30003	CITI

Table Branch

BranchID	BankID	BranchName	BranchAddress
A100	30003	CITYCENTER	Manama
A101	30003	HAMAD TOWN	HAMALAH
R100	30001	ZALLAQ	ZALLAQ
R101	30001	SEEF	Manama

Table Account

AccountID	BranchID	ClientID	Balance
AC100	A100	10000	20000
AC101	A100	10001	120000
AC102	A101	10002	25300
AC103	R100	10003	26500
AC104	R100	10004	45600
AC105	R101	10004	56000

Type SQL queries to answer the following:

1. Create all tables with their related constraints.
2. Insert data into the different tables.
3. Modify table Bank to add a new attribute BankCode of Type string with exactly 8 characters.
4. Find clients with first names starting with A and having at least 3 characters.
